

Mustafa Ahmed Elsayed Mahmoud

Frontend Developer

Email: aldhb176@gmail.com | Phone: +20 122 975 7587 | Location: Zagazig, Egypt | LinkedIn: linkedin.com/in/m0sstafaahmed | GitHub: github.com/M0staafaAhmed

SUMMARY

Frontend Developer focused on shipping complete, working products. Built the front end for 3 responsive web applications using React.js and Next.js, including an e-commerce storefront and a social media platform, with an emphasis on clean component architecture, state management, form validation, and REST API integration across the modern React ecosystem (Redux Toolkit, React Query, React Hook Form, Zod, Tailwind CSS). Independently built a mental health support platform completely from scratch, front end and back end, including authentication and an AI-powered chatbot. Holds a B.Sc. in Information Systems and brings strong problem-solving, collaboration, and attention to detail to front-end engineering work.

PROFESSIONAL EXPERIENCE

(personal / independently-built projects — no formal employer yet; a selection of my strongest work)

Full-Stack Developer — Safe Space (Personal Project, built from scratch) | Jul 2026

React • Redux Toolkit • React Query • React Hook Form • Zod • Tailwind CSS v4 • Git | github.com/M0staafaAhmed/mental-health | mentall-health.vercel.app

- Collaborated with one teammate on the frontend using Git (feature branches, pull requests, code reviews), while independently building the entire backend — spanning 15+ React components, JWT authentication, self-assessment tests, and an AI-powered support chatbot.
- Led the React/Redux Toolkit frontend architecture while independently building 10+ REST API endpoints on a Node.js/Express backend with a MySQL database.

Frontend Developer — FreshCart (Personal Project) | May 2026

Next.js • React Hook Form • Zod • Shadcn/UI • Swiper • Motion | github.com/M0staafaAhmed/freshCart | fresshcart.vercel.app

- Developed the front end of a fully responsive e-commerce storefront covering product browsing, shopping cart, and a 3-step checkout flow, deployed to production on Vercel.
- Implemented client-side form validation with React Hook Form and Zod, and used Shadcn/UI and Swiper across 10+ reusable components to build a polished, mobile-first interface consuming a REST API.

Frontend Developer — Vibley (Personal Project) | Mar 2026

React 19 • React Query • Framer Motion • React Router • Zod • HeroUI • Axios | github.com/M0staafaAhmed/vibley | vibley-virid.vercel.app

- Developed the front end of a social media web application across 8+ pages covering authentication, content feeds, and profile interactions, built entirely with React 19 and React Router.
- Used React Query to manage server state and caching across 6+ API endpoints, and Framer Motion to power a smooth, animation-driven user interface.

SKILLS

Programming: C++, Object-Oriented Programming (OOP)

Frontend & Frameworks: React, Next.js, JavaScript, HTML5, CSS3, Tailwind CSS, React Hook Form, Zod, React Query, Redux Toolkit, Responsive Web Design, REST API Integration

Tools: Git, GitHub, Postman, Version Control

Soft Skills: Problem-Solving, Attention to Detail, Collaboration, Communication, Adaptability, Time Management

EDUCATION

B.Sc. in Computers & Information — Information Systems

Zagazig University, Faculty of Computers & Information

LANGUAGES

Arabic — Native | English — Intermediate
